

Headshot Requirements

Please see below for the requirements for submitting a nominee's headshot for the 2017 UniqueSource Achievement Award. These requirements are being distributed to ensure that all nominee's headshots look similar and that we receive a high quality, high resolution photo that we can use for print. An expensive camera IS NOT required to get a photo that will meet the below specifications. Most smartphones that have been produced in the last few years are capable of taking an adequate photo. Please make sure to check your camera/smartphone settings to ensure that you're taking a high resolution picture.

Photo Specifications:

- Images should be no larger than 3MB in size.
- The minimum resolution is 1200 pixels x 1200 pixels. This information can be found after transferring the image to a PC by right clicking on the image, selecting Properties, and going to the Details tab. Below is a screenshot to show where you'll find resolution details.

How to position subject in viewfinder:
